

# GRAS 26HG

1/4" Preamplifier with 3 m Integrated Cable, Low Frequency

Freq range: 1 Hz to 200 kHz  
Noise: 1.8  $\mu$ V Gain: -0.29 dB  
Special feature: For low frequency and low-noise applications

The GRAS 1/4" Preamplifier Type 26HG is a small robust unit optimised for acoustic measurements using condenser microphones. It has a very low inherent noise level, a wide dynamic range and a wide frequency response from below 1 Hz to above 200 kHz.

## Design

All GRAS microphone preamplifiers are based on a small ceramic thick-film substrate with a very high input impedance. The ceramic substrate is shielded by a guard ring to minimise the influence of stray capacitance and microphonic interference.

The casing is made of stainless steel for maximum strength and durability. The small dimensions of this preamplifier ensure reliable operation under humid conditions owing to the heat generated by internal power dissipation.

## Dynamic Range

Type 26HG can handle both single and dual-sided power supplies. The supply can vary between 28 VDC and 120 VDC single-sided or  $\pm 14$ VDC and  $\pm 60$  VDC dual-sided. When using the high supply voltage (120VDC or  $\pm 60$ VDC), the dynamic range exceeds 140 dB.

## Noise

The electrical circuit in Type 26HG preamplifier is built on a ceramic substrate using selected low noise components to gain very low self-noise. The electrical self-noise is so low that system noise is mainly determined by the microphone capsule's thermal noise.

## Frequency response

The low-frequency cut-off of the Type 26HG preamplifier is mainly determined by the input impedance of the preamplifier and the capacitance of the microphone capsule. The capacities 20 pF, 6.5 pF and 3 pF equal the typical capacitances of 1/2", 1/4" and 1/8" microphone capsules respectively.

The high-frequency cut-off is determined by the preamplifier's ability to drive capacitive loads (slewrate), caused by the cable. For large-signals,

the effects of these parameters must be accounted for when measurements are performed. The large-signal response for Type 26HG for various capacitive loads corresponding to different cable lengths is shown in the data sheet. The output level is in decibels relative to 1 Volt. Typical capacitance for the cable is 100 pF/m (30 pF/foot).

Type 26HG is typically used with a Type 40AN low frequency microphone capsule to reach a -3-dB cut-off frequency around 0.25 Hz.

## Connector

Preamplifier Type 26HG is provided with a 3-m lightweight cable terminating in a 7-pin LEMO series 1B plug. The cable is only 2.5 mm in diameter and will withstand temperatures from -40 °C to +150 °C. An adaptor (GR0010) for GRAS 1/2" microphones is included.

## About GRAS Sound & Vibration

GRAS is a worldwide leader in the sound and vibration industry. We develop and manufacture state-of-the-art measurement microphones to industries where acoustic measuring accuracy and repeatability is of utmost importance in R&D, QA and production. This includes applications and solutions for customers within the fields of aerospace, automotive, audiology, and consumer electronics. GRAS microphones are designed to live up to the high quality, durability and accuracy that our customers have come to expect and trust.

GRAS Sound & Vibration is represented through subsidiaries and distributors in more than 40 countries and is part of Axiometrix Solutions, a leading test solutions provider comprised of globally recognized measurement brands. Read more at [www.GRASacoustics.com](http://www.GRASacoustics.com)
